Sheet Link : https://docs.google.com/spreadsheets/d/1-x1qJfESTm0tjJ0vnVON1WoFfMUSiF3ItF1sdR5N9lc/

1. Find the **2nd highest salary** in the dataset
2. Find the **5th lowest salary**
3. Find the **highest salary in IT department** using IF
4. Find **top 3 salaries** using LARGE
5. Find the **lowest salary greater than 50,000**
6. Find **3rd highest bonus where rating = 5**
7. Find **smallest salary where experience > 10**
8. Rank employees using LARGE logic (Top 1, Top 5, Others)
9. Find **highest salary excluding maximum value**
10. Find **2nd smallest bonus for HR department**
11. Find **median salary of all employees**
12. Find **median salary where department = Sales**
13. Compare **median vs average salary**
14. Find **median bonus where rating ≥ 4**
15. Find **mode of ratings**
16. Find **most common salary range (use ROUND + MODE)**
17. Find **mode of bonus where experience > 5**
18. Check if median salary > 50,000 → return "High" else "Low"
19. Find median salary excluding values < 30,000
20. Identify if most frequent rating is 5 using IF
21. Round salary to nearest **1000**
22. Round bonus to nearest **500**
23. Round salary only if > 70,000
24. Categorize salary after rounding (High/Medium/Low)
25. Use ROUND with IF to normalize salary data
26. Round experience to nearest integer and analyze
27. Create salary buckets using ROUND + IF
28. Round bonus and find highest rounded bonus

29. Compare original vs rounded salary difference

30. Apply rounding only for IT department

31. Count missing values in Bonus column

32. Check if dataset is complete using COUNTBLANK

33. Count total filled records in Salary column

34. If blanks > 0 → return "Data Issue"

35. Count employees with complete records

36. Use COUNTA to count total entries in dataset

37. Validate if all ratings are filled

38. Identify incomplete rows using IF + COUNTBLANK

39. Count non-empty bonuses where rating = 5

40. Create status column: "Complete / Incomplete"

41. Find highest salary overall

42. Find highest salary in each department (using IF)

43. Find max bonus where experience > 10

44. Compare max salary vs median salary

45. Highlight employees with max salary

46. Find 2nd highest using MAX logic

47. Find max salary excluding top value

48. Use MAX with IF for conditional filtering

49. Create category using MAX (Top Performer)

50. Check if any salary > 1 lakh using MAX + IF
